

SAFETYLINK

NATIONAL BRAND FILM

FULL PRODUCTION BIBLE

Working title: **“South Africa Never Stands Alone”**

90–120 second hero commercial • Photorealistic AI / live-action hybrid production

CONFIDENTIAL CREATIVE DEVELOPMENT DOCUMENT

1. CREATIVE NORTH STAR

Core idea: South Africa is connected by millions of ordinary acts of care. SafetyLink is the invisible layer that helps turn that care into coordinated action when something goes wrong.

Intertextual reference: The film may evoke the broad cultural language of premium South African national storytelling—recognisable people, places, humour/ warmth, regional identity and a sense of shared belonging—but must remain an original SafetyLink work. Do not reproduce another campaign’s script, shots, slogans, music or visual signature.

Emotional progression: belonging → everyday life → small disruption → instant connection → reassurance → national unity.

Rule: SafetyLink is not portrayed as a superhero product. People are the heroes; the technology connects them.

Brand restraint: No pricing. No exaggerated claims. No graphic violence. No manufactured panic. The product demonstration must be technically truthful to the final deployed SafetyLink experience.

2. FORMAT & DELIVERABLES

Master: 16:9, 4K/UHD, 24 fps cinematic master. Create 9:16 and 1:1 crops from protected compositions. Hero cut: 105 seconds target, with an edit range of 90–120 seconds. Produce clean master, music/VO mix, captions, 30-second cutdown, 15-second cutdown and short vertical teasers.

3. CASTING & CHARACTER SYSTEM

Character	Age / profile	Function
Naledi	9–11, school child	Human anchor; everyday independence and family connection.
Thabo	35–45, taxi driver	Community connector; calm, observant, recognisably local.
Lerato	25–35, nurse/health worker	Shows responsibility and the people who care for others.
Aphiwe	20–30, student/young professional	Represents movement between home, work and city.
Mpho & Gogo	30s + 60s	Family layer; intergenerational reassurance.
Limpopo family	Mixed ages	Regional identity; Venda/Limpopo visual presence.
Responder team	25–50	Professional, composed; never action-movie exaggerated.

4. LOCATION LANGUAGE

Cape Town: Table Mountain, urban streets, MyCiTi/taxi movement, residential morning light.

Johannesburg: skyline/urban density, taxi rank, Soweto residential streets, ordinary commuter life.

Durban: beachfront/Golden Mile atmosphere and warm coastal movement.

Limpopo/Venda: Nandoni Dam/river landscape, Venda-region roads and village life, mountains and distinctive northern light.

Nationwide connective shots: highways, school gates, clinic/hospital exterior, neighbourhood shops, pedestrian movement, family homes.

Landmarks are establishing punctuation, not tourism postcards. Keep people in the foreground and use the landmark to establish place.

5. VISUAL & AUDIO LANGUAGE

Visual: Photorealistic South African faces, natural skin texture, authentic clothing, believable traffic, imperfect streets, practical lighting, real environmental depth. Avoid the generic “Al Africa” look.

Camera: 24–35 mm environmental wides; 50 mm human mid-shots; 85 mm emotional close-ups. Controlled handheld for human scenes; stabilised/gimbal movement for transitions; aerials used sparingly.

Light: Dawn and late-afternoon warmth balanced with neutral daylight. Emergency moments should not suddenly become horror lighting; tension comes from performance and editing.

Sound: taxis, school bells, footsteps, traffic, distant conversations, coastal ambience, birds, wind and household sounds. Music begins sparse, grows through the network montage, then resolves warmly.

6. MASTER TIMELINE / SCRIPT

01 • 00:00–00:07 — OPEN — A COUNTRY WAKES

ACTION: Table Mountain at dawn. Cut to Limpopo/Nandoni landscape. Johannesburg street waking. Durban coast. Tight human details: kettle, school shoes, taxi ignition, nurse fastening ID.

VOICEOVER: VO: “Every day, millions of South Africans leave home with one thing in common...”

SOUND: Music: one restrained pulse; natural ambience dominant.

CAMERA: Wide aerial → 50mm detail cuts. Slow, confident movement.

02 • 00:07–00:17 — NALEDI — SCHOOL MORNING

ACTION: Naledi exits home with backpack. Parent watches from doorway. She joins other children. School gate. She checks her phone/watch naturally.

VOICEOVER: VO: “...someone is waiting for them to come back.”

SOUND: School ambience; light footsteps; distant taxis.

CAMERA: 35mm tracking at child height; 85mm parent reaction.

03 • 00:17–00:28 — THABO — TAXI ROUTE

ACTION: Thabo starts his taxi. Passengers board. He greets an elderly passenger. Johannesburg/Soweto texture. A small roadside incident is visible but not graphic.

VOICEOVER: VO: “Because here, looking out for one another is part of how we live.”

SOUND: Taxi door, engine, radio murmur.

CAMERA: 50mm intimate cabin; 24mm exterior movement.

04 • 00:28–00:38 — LERATO — CARE

ACTION: Lerato enters a clinic/hospital shift. Washes hands. Helps a patient. Cut to coastal worker / commuter. Nation-wide rhythm builds.

VOICEOVER: VO: “At home. On the road. At work. Wherever life takes us.”

SOUND: Music gains strings/pulse; clinical ambience.

CAMERA: 50mm observational; no glamour posing.

05 • 00:38–00:49 — THE DISRUPTION

ACTION: Naledi is waiting at a pickup point later than expected. She looks around. In a separate vignette, an adult hiker/commuter has a minor emergency and reaches for the SafetyLink device. Keep incidents distinct and plausible.

VOICEOVER: VO: “And sometimes... life changes in a moment.”

SOUND: Music drops. Heartbeat-like low pulse; no melodrama.

CAMERA: 85mm close-up; shallow depth; controlled handheld.

06 • 00:49–01:02 — SAFETYLINK ACTIVATION

ACTION: Close-up of the supplied panic device. User activates it. Cut to supplied SafetyLink UI. Show alert state, location/incident information and notification flow only as implemented.

VOICEOVER: VO: “One action can send the signal. Share the right information. And bring the right people into the moment.”

SOUND: Distinct alert tone, then music resumes.

CAMERA: Macro product shot → screen insert → phone close-up.

07 • 01:02–01:14 — THE NETWORK RESPONDS

ACTION: Family phone receives alert. Organisation/security dashboard receives incident. Responder sees location. A trusted contact moves toward the user. Keep response calm and professional.

VOICEOVER: VO: “Not one person. A network.”

SOUND: Layered notification sounds; music broadens.

CAMERA: Fast but readable cuts; match cuts between screens and faces.

08 • 01:14–01:27 — SOUTH AFRICA CONNECTS

ACTION: Rapid geographic montage: Cape Town/Table Mountain; Durban coast; Johannesburg/Soweto; Limpopo/Venda/Nandoni. Each location has a human action: mother checks phone, driver slows to help, colleague answers, family opens gate.

VOICEOVER: VO: “Different places. Different lives. One country that knows how to show up.”

SOUND: Music reaches main emotional lift.

CAMERA: 24mm/35mm environmental portraits; 2–3 sec shots.

09 • 01:27–01:39 — REASSURANCE

ACTION: Naledi reunites with parent. Thabo continues route. Lerato leaves shift. Limpopo family at dusk. No celebration of danger—only relief and ordinary life continuing.

VOICEOVER: VO: “Because safety is more than an alert. It is knowing you are connected.”

SOUND: Music resolves; ambience returns.

CAMERA: 50mm/85mm warm portraits.

10 • 01:39–01:45 — END CARD

ACTION: Dark SafetyLink brand field. Supplied logo. Minimal UI motion: signal/network line resolves into logo. Website CTA: SafetyLink.online.

VOICEOVER: VO: “SafetyLink. Stay connected. Stay protected.”

SOUND: Single resolving tone.

CAMERA: Locked-off brand frame; 2-second logo hold.

7. VOICEOVER — CLEAN RECORDING SCRIPT

“Every day, millions of South Africans leave home with one thing in common... someone is waiting for them to come back.

Because here, looking out for one another is part of how we live.

At home. On the road. At work. Wherever life takes us.

And sometimes... life changes in a moment.

One action can send the signal. Share the right information. And bring the right people into the moment.

Not one person. A network.

Different places. Different lives. One country that knows how to show up.

Because safety is more than an alert. It is knowing you are connected.

SafetyLink. Stay connected. Stay protected."

8. SAFETYLINK PRODUCT / UI DIRECTION

Use the supplied SafetyLink hardware and UI assets as visual truth. Do not invent interface controls, status labels, responder capabilities or emergency-service integrations that are not actually implemented. Where the final UI differs from the supplied screenshots, replace the screen inserts before final export.

Product hero: device in hand, natural wear, realistic scale. Avoid floating CGI product shots unless used only for a 1–2 second transition.

UI animation: 6–10 frame/beat sequence: activation → confirmation → incident/location state → recipient notification → response acknowledgement. Keep every screen readable for at least 1.5 seconds in the master where information matters.

Privacy: use fictional names, coordinates and phone numbers in the commercial. Never expose real personal information.

9. AI VIDEO GENERATION PROMPT SYSTEM

Global prompt prefix: "Photorealistic contemporary South Africa, authentic local casting, documentary-grade realism, natural skin texture, physically accurate hands and faces, believable South African architecture and road traffic, cinematic but observational, subtle lens breathing, realistic motion blur, practical lighting, no stereotypes, no exaggerated poverty imagery, no generic stock-footage look, no text generated inside the scene, no logos except supplied assets, 4K cinematic detail."

Negative prompt: "cartoon, plastic skin, beauty-filter faces, warped hands, extra fingers, unreadable signage, invented African flags, fake landmarks, generic safari imagery, over-saturated grading, disaster-movie acting, duplicated people, floating objects, incorrect vehicle geometry, random UI text."

Scene prompt — school: "South African primary school morning, 10-year-old girl with backpack walking from a modest but well-kept residential street toward school, parent watching from doorway, other children and taxis in natural background, warm early sunlight, candid documentary cinematography, child-height tracking shot."

Scene prompt — taxi: "South African minibus taxi interior during morning commute, adult male driver greeting passengers naturally, diverse commuters, authentic dashboard and road motion, Johannesburg/Soweto environment outside windows, restrained handheld documentary camera, realistic reflections."

Scene prompt — Limpopo/Venda: “Northern South Africa, Limpopo/Venda region, family and community life near Nandoni Dam landscape, distinctive hills and vegetation, authentic local clothing and contemporary everyday life, late-afternoon light, cinematic aerial establishing shot followed by intimate 50mm human shot.”

Scene prompt — response: “South African family member receives a SafetyLink emergency notification on a smartphone, realistic reaction—focused, calm, immediately attentive, contemporary home interior, screen insert will be composited in post, no invented phone text, shallow depth of field.”

10. EDITING & POST

Pacing: first 40 seconds breathe; 40–75 seconds tighten; 75–99 seconds expand into geographic/emotional montage; final 6 seconds simplify.

Transitions: match movement, eyelines, sound bridges and geographic cuts. Avoid flashy transitions. Use a recurring “connection” motif: phone vibration, hand movement, road line, map line, gaze.

Grade: cinematic naturalism. Preserve skin tones and local environmental colour. Do not make every location look identical.

VFX: screen replacement, subtle location/map animation, clean-up of AI artefacts, crowd continuity, vehicle plates, logo compositing, signal-line animation.

QC: verify every UI label, URL, logo lockup, device appearance, location claim and emergency workflow against the production build before release.

11. MUSIC & SOUND DESIGN

Commission or license an original score. Suggested arc: sparse piano/soft plucked texture → restrained percussive pulse → wider strings/pads → warm resolution. Incorporate subtle contemporary South African rhythmic character without turning the soundtrack into a stereotype. Capture location sound separately wherever possible.

12. PRODUCTION WORKFLOW

Phase A — asset lock: logo, current UI captures, device/product photography, approved brand typography, final website URL and product workflow.

Phase B — previsualisation: generate 3–5 second AI tests for each character and location; lock faces and wardrobe before full shots.

Phase C — principal generation/live plates: create environment plates and human performances; maintain character reference consistency.

Phase D — UI/VFX: composite the real supplied interface and hardware assets.

Phase E — edit/VO/music: assemble master and cutdowns.

Phase F — technical/brand QA: verify claims, spelling, UI fidelity, accessibility captions and export specs.

13. DIRECTOR’S NON-NEGOTIABLES

- Make South Africans look like South Africans—not generic AI characters placed in South Africa.
- Show dignity, humour and normal life. Avoid poverty porn, crime-porn and disaster spectacle.
- Landmarks identify the country; people carry the story.
- Never imply that SafetyLink guarantees rescue, police response or medical outcomes unless the deployed service contractually and technically supports that claim.
- Emergency scenes remain calm and competent. The product reduces uncertainty; it does not manufacture fear.
- Use supplied SafetyLink hardware/UI as the source of truth.
- No pricing in the hero film or its script.

- Keep all geography, languages, accents and cultural details locally credible.

14. FINAL END CARD OPTIONS

Primary: **SAFETYLINK — Stay connected. Stay protected.**

Secondary: **When it matters, your network knows.**

CTA: **SafetyLink.online**

15. PRODUCTION ASSET CHECKLIST

- SafetyLink master logo / transparent SVG or PNG
- Final product/device reference photos
- Current app UI screenshots and screen recordings
- Approved brand fonts and colour values
- Final legal/product claim language
- Approved website URL and QR code if required
- Final emergency escalation workflow
- Voiceover talent brief and pronunciation guide
- Music licence/original-score agreement
- Caption/subtitle master and translations
- 16:9 / 9:16 / 1:1 safe-area guides
